Reasons for Allowance

Claims 1-24 are allowable over the prior art of record.

The following is an examiner's statement of reasons for allowance: the best prior art of record, Matsui, taken alone or in combination of other references, does not teach or fairly suggest a method or a Tx line driver comprising, among other things, a logic for selecting one of a plurality of selectable reference currents of the primary and pre-emphasis current selection modules, the logic producing current setting control signals to the pre-emphasis current selection module and to primary current selection module (claim 1), the first current selection module providing a first reference current for the first current mirror and the second current selection module providing a second reference current, independent of the first reference current, for the second current mirror (claim 8), a current selection module for providing a selectable reference current level, independent of a reference current level for the primary current driver, to the pre-emphasis current driver responsive to a transition in the outgoing data stream to prompt the pre-emphasis current driver to generate a corresponding amount of pre-emphasis current (claim 12); and transmitting pre-emphasis current setting signals to a first current selection module to prompt the current selection module to generate a specified amount of reference current upon receiving a pre-emphasis signal (claim 19), as set forth in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
